Wrap Up

Initial Coin Offering and the ERC20 Token Contract

Initial Coin Offering

- Is usually a Smart Contract offering „Tokens"

- Can be published on the ethereum blockchain

- Can contain all sorts of logic
    - But better follows the ERC20 Standard Interface

ERC20 Token

- A set of standard functions
  - Balance/send tokens

- Great for interaction
  - Between Dapps like the Ethereum Wallet
  - Or other Contracts like Exchanges

Fixed Supply token

- Token Example

- Source Code available

- Can be published anywhere by anyone

- Follows the ERC20 Token Interface

Thanks
