TROUBLESHOOTING

MIST and Mac/Linux

GETH STANDARD DIRECTORY

- Geth.ipc file is produced at start
  - OS X: ~/Library/Ethereum/
  - Linux: ~/.ethereum/

- Geth (from Mist) will look for a geth.ipc file there

- If it can't find any, it will start its own network

HOW TO CONNECT

- „geth attach" and MIST have the same problem
    - Need to connect to the IPC file
    - On Linux/Mac it's always printed during startup of geth

    - `I0219 09:45:48.128503 node/node.go:290] IPC endpoint opened: /Users/username/Library/Ethereum/geth.ipc`

    - For GETH:
        - `geth attach ipc:/path/to/the/file/geth.ipc`

    - For MIST:
        - `/Applications/Mist.app/Contents/MacOS/Mist --rpc <path to chaindata>/geth.ipc`

WHERE TO FIND FURTHER INFORMATION?

- Checkout the repository

- Or ask us in the Q&A

- Because it changes quite regularly!
  - But we try to keep everything updated.
